## Products:

**MediOps:** **MediOps** is a web and mobile enabled hospital management Software. **MediOps** is designed and customized exclusively for the hospitals and health care providers in India. **MediOps** has two versions. **MediOps** - Lite and Enterprise. **MediOps** Lite caters to small clinics with simple and quite patient registration, case history and billing processes features. While the enterprise version includes inpatient management along with various features such as bed / ward management, chief complaints and diagnosis, daily treatment, inpatient billing, and discharge summary. Other module of the software automates hospital's medical store to electronically manage requisitions, issues and inventory of medicines. This is a multi-user system with user management facilities.

**PCAS:** The patient care and administration system provide end-to-end process management of a palliative care centre which includes in-patient care, home visits etc.

## Business Models:

**BMS** has been offering various business models as per the needs of the customers and their projects. BMS first understands the processes followed by its customers and accordingly adjusts its own processes to achieve best and quick results. **BMS** offers various business models such as:

**Offshore Development Centre:** **BMS** works on 'Outsourcing Model' from its offshore development centre in Pune, India. The offshore development has been a

cost effective model and well coordinated activity. With this model **BMS** provides its clients round-a-clock product development.

**Onsite Development:** **BMS** employee(s) travel to customer's location and work as an extended arm of the customer's team. Along with the customer's team, we assist them in product development. This helps in fast and accurate requirement gathering and deployment phase. We also provide onsite consulting services. Our team of highly skilled consultants provides technical insights, ability and guidance to strengthen customer's in-house capabilities and resources, working at customer's location along with your team and under your supervision.

**Partial Onsite / Offshore Development:** Our onsite team acts as a front end and maintain proximity with customers while the bulk of the work happens offshore. This model is useful in case of crucial projects where direct communication is required with the clients at regular intervals. This also helps in round the clock continuous work cycle which becomes possible by making the best possible use of the time-zone difference.

**Dedicated Centre Development:** **BMS** assists its customers in various phases of product development cycle. If the customer wants to include **BMS** for the entire product development cycle, **BMS** offers a dedicated centre wherein it will dedicate its resources and certain part of infrastructure for the customer. This helps to reduce turnaround time for end customers. It also provides the client maintenance and sustenance activity at reduced cost.

### **Why BMS?**

- Global experience and local presence in USA & UK.
- Resources optimization- freeing up your critical resources for key tasks
- Cost saving solutions as per customer needs.
- Any time review – Total transparency towards the customers.
- Constant communication through various time zones.
- We work with you and for your customer, developing cutting edge products, enhancements, and applications.
- We help you gain superior product positioning, competitive advantage and customer preference.
- We work towards our customers as one team with one objective.
